INTRODUCTION

Volume III of the Import Commodity Classification is designed for use in compiling Canada's import statistics. It lists in alphabetic order both the English descriptions of all import commodity classes as they appear in monthly and quarterly trade reports, and the "office rulings" on commodity descriptions not specifically mentioned in the commodity classes but frequently encountered on customs import documents. Its purpose is to assist the staff in locating the class codes and units of quantity appropriate to the principal commodity descriptions with which they are faced. Because it is a working document, its content is continually changing, and it is therefore printed in loose-leaf form to facilitate revisions to individual pages as required.

This volume makes no attempt to provide a ruling for every product imported to Canada or for every term encountered on import documents. A complete index would be too unwieldy for daily use. Nor are the rulings it contains designed to be self-sufficient; each ruling must be read in the context of the full class description and notes contained in Volume I of the Import Commodity Classification (DBS Cat. No. 12-524). Finally, it is not intended to illustrate the contents of particular classes; that purpose is better served by Volume II of the Import Commodity Classification (DBS Cat. No. 12-525) which presents the same material arranged by commodity class, although even in that arrangement its lack of completeness limits its illustrative value.

All office rulings (including commodity class descriptions) are kept on punch cards to aid in making revisions and in controlling their accuracy and adequacy. This volume has been printed by listing these punch cards. This has imposed certain important limitations on the phrasing, punctuation and format which are used. The most important limitation is that of length: all class descriptions and most rulings are confined to one descriptive line not exceeding 35 characters in length (including all blank spaces, but not including the class code or unit of quantity). Because of this limitation there is extensive use of abbreviations, and this volume must be read carefully if users are to avoid being misled by these abbreviations. When the meaning of a ruling could not be expressed in one line even with abbreviations, a second line of not more than 31 characters was added. In these cases the second descriptive line is identified by a 4 letter indentation.

This volume contains four distinct types of item:

1. Specific commodity rulings: these consist of a 35 character description (occasionally supplemented by a second descriptive line of up to 31 characters), a unit of quantity (or a dash if goods which would be governed by a specific ruling are recorded without a quantity), and a class code. Leader dots link the ruling and its unit of quantity. Specific commodity rulings account for the vast majority of items in this volume.

Note that some rulings to certain classes specify a unit of quantity, while other rulings to the same classes show a dash in the quantity column. This will occur whenever a class takes both complete units and parts of units; rulings on complete units will usually specify a quantity (commonly "number"), while "parts" rulings will show a dash because parts are recorded without quantities.

2. Class descriptions: these consist of one descriptive line of up to 35 characters, a unit of quantity (or a blank if the class does not record quantity), and a class code. They do not have leader dots, and are further identified by the symbol \boxtimes preceding the description. In some cases class descriptions are sufficiently specific to make rulings on these classes unnecessary, but in other cases they are so general that they are useful only in locating a particular class in the classification.

Some class descriptions are preceded by the symbol # instead of \boxtimes ; an extra digit follows the class number for these class descriptions and for all rulings relating to these classes. Statistics on commodities so identified are not available except to employees of the Dominion Bureau of Statistics. In all publicly available records such classes are combined with the most appropriate general class within the same commodity group (e.g.: class 423-99-3 is included with 423-99, class 429-99-3 with 429-99, etc.).

3. Group descriptions: these are intended to assist in locating groups (or sub-groups) of commodities often thought of as collective units or important in the structure of the classification. They may contain either one or two descriptive lines (the second of which will be completed by leader dots), and may contain a unit of quantity (where all classes in the group show the same unit), or a dash (where no classes take a quantity), or a blank in the quantity column (where there is no common standard within the group). Group descriptions can always be identified by the fact that no numbers appear to the right of the hyphen in the code column.
4. Definitions and cross-references: these contain one or two descriptive lines, omitting both quantity and codes. They may define a term used in the rulings (e.g.: FAB IS AN ABBREVIATION FOR FABRICS.), indicate the "key words" under which rulings may be found (e.g.: OAK ... SEE LOGS, LUMBER), or warn against basing a decision on commodity classification on a term known to apply to more than one class of commodity (e.g.: PENACOLITE IS A GENERAL TRADE NAME.). As indicated in these examples the spaces for description are completed by leader dots.

These four types of item are intermingled throughout this volume in alphabetic order. The alphabetic arrangement has a few special features:

1. If the first word of an item is abbreviated (this is rare), it is nevertheless listed as though printed in full (e.g.: the ruling RR CARS, MINE, EXC SELF-PROPELLED ... comes in the middle of a group of rulings whose first word is RAILWAY).
2. If the first part of a description is numeric, it is listed according to the alphabetic portion of the description (e.g. 2, 4-D and 2, 4, 5T MIXTURES ... is the first ruling of the "D" section).

3. A number following the initial letter(s) of a description will cause that item to precede one with the same initial letter(s), (e.g.: AS 6150 WELDING WIRE, SPOOLED precedes AS IS AN ABBREV. FOR ALLOY STEEL because 6 in 6150 a number, precedes the I in IS).
4. Punctuation marks and hyphens are treated as blank spaces (see preceding example).
5. Blank spaces take precedence over either numbers or letters (e.g.: STEEL WOOL precedes STEELON FAB ...). This results in the grouping of all items having the same first word, and is especially important in view of the "key word" principle used in preparing this volume.
6. In a series of rulings using the same "key word", the ruling or class description for the n.e.s. (not elsewhere specified) category usually appears at the end of this series, e.g.:

PIGMENTS, GREEN	LUMBER, PINE, GEORGIA
PIGMENTS, YELLOW	LUMBER, PINE, SOUTHERN
PIGMENTS N.E.S.	LUMBER, PINE N.E.S.

The "key word" principle was used to reduce the need for double-indexing rulings, and thus to reduce the bulk of this volume. It requires that items be shown according to the work which most clearly expresses the basic nature of the commodity, and as a result it is usually unnecessary to index any term more than once. The following examples show how a few terms which may be encountered on customs documents are indexed in this volume according to the key word principle:

<u>Terms which May be Used on Customs Documents</u>	<u>Terms as Indexed by Key Word Principle</u>
X-ray <u>film</u> , unexposed	<u>Film</u> , x-ray, unexposed
Aluminum <u>foil</u>	<u>Foil</u> , aluminum
Bicycle <u>pumps</u>	<u>Pumps</u> , bicycle
Men's and boys' woollen <u>slacks</u> , not knitted	<u>Slacks</u> , men's & boys', wool, exc kntd
Garnetted wool <u>waste</u>	<u>Waste</u> , wool, garnetted
Printed <u>wrappers</u> in rolls	<u>Wrappers</u> , printed, in rolls

If a commodity is usually identified on documents primarily by a trade name, the trade name is normally the key word in rulings (e.g.: Spectra-glaze compounds, Randac resins). Where machinery and other equipment is encountered, the key word is that word which identifies the type of machine or apparatus (e.g.: strapping machinery, echo sounding equipment). In the above cases the terms "compounds", "resins", "machinery" and "equipment" have such a broad meaning that they do not provide a sufficiently specific answer to the question "What is the commodity?", and are therefore not suitable as "key words". To index under such terms would result in overlong and unwieldy lists in certain parts of this volume.

In preparing rulings covering multi-word names of chemicals and pharmaceuticals, the words which would normally appear first on customs documents (or in a chemical dictionary) were treated as key words (e.g.: sodium carbonate monohydrate). These items should be easy to locate.

To use this volume properly it is essential that the key word principle be thoroughly understood, and that the key word of a description be determined before an attempt is made to locate that description in this volume. While double-indexing has not been completely eliminated, failure to take the key word principle into account could make it difficult or impossible to find a particular item. The chief exceptions to the key word principle are the class descriptions and the cross-reference items used occasionally to direct attention to the proper "key words".

This volume makes extensive use of abbreviations because of the need to limit most descriptions to 35 characters. Some are standard dictionary abbreviations, some are terms widely used in industry, and some have been tailored to the specific needs of this volume by such devices as the omission of vowels or the omission of terminal syllables. There is no complete list of the abbreviations used, and more than one abbreviation may be used for the same word or phrase, and one abbreviation sometimes has two different meanings. The following examples define some of the more common abbreviations and illustrate the lack of uniformity:

(1) To describe steel:

AS ... alloy steel	CD ... cold drawn
CS ... carbon steel	CF ... cold finished
SS ... stainless steel	CR ... cold rolled
where distinguished	HR ... hot rolled
from other alloy	
steel)	

(2) To describe textile fibres, textiles, and textile products:

BL bleached	M-M)
COT cotton	MAN-MD) man-made
FAB fabrics	WOV woven <u>or</u> broad woven
KNIT) knitted	WOV UAR narrow woven
KNTD)	

(3) Miscellaneous:

ELEC electric(al)	MAT materials
EXC except	PLAST ... plastic
INCL including	PROD products
IND industry	PT) ... parts
INDUST ... industrial	PTS)
MACH machine(s)	SYN synthetic
MACHY) ... machinery	T.I. tariff item
MCHY)	

UNITS OF QUANTITY AND DEFINITIONS USED IN CANADIAN IMPORT STATISTICS

Bbl.	Volume in barells (for petroleum: 35 Canadian gallons or 42 U.S. gallons).
Broad woven ...	More than 12 inches in width.
Canned	Preserved solely by being shut off from air.
Carat	Weight in carats.
Cord	Volume in cords.
Cwt.	Weight in hundredweights of 100 lb. each.
Cwt. N.	For canned foods, weight of contents of cans in hundredweights of 100 lb. each, the weight of all containers and packing being excluded.
Doz.	Number of dozens.
Doz. Pr.) Dz. Pr.)	Number of pairs in dozens.
Ft.	Length in linear feet.
Gal.	Volume in Canadian gallons (1 U.S. gal. = 0.83 Can. gal.).
Gross	Number in gross.
Hardwood	Wood from broad-leaved trees.
Kg.	Weight in kilograms (1 Kg. = 2.2 lb.).
Lb.	Weight in pounds.
Lb. N.	For canned foods, weight of contents of cans in pounds, the weight of all containers and packing being excluded.
M.	Number in thousands.
M. B. Ft.) M. B. F.)	Volume in thousand board feet.
M. Cu. Ft.) M. C. F.)	Volume in thousand cubic feet.

M. Kw. H. Thousand kilowatt hours.

Narrow woven .. Not more than 12 inches in width.

N E S or NES .. Not elsewhere specified.

No. Number.

Oz. Weight in ounces.

Pack Number of packs.

Pair Number of pairs.

P. Gal. Volume of alcoholic content in terms of Canadian gallons
of the strength of proof (1 U.S. P.gal. = 0.74 Can. P.gal.).

Pkg. Number of packages.

Softwood Wood from coniferous trees.

Sq. Ft. Area in square feet.

Sq. Ft.
3/8" equiv.)

) .. Volume in square feet of 3/8" thickness other thicknesses
to be converted to the equivalent of 3/8" thickness (e.g.
SF3/8 10,000 sq. ft. of 3/16" plywood = 5,000 sq. ft. of 3/8"
equivalent).

Sq. Yd. Area in square yards.

Ton Weight in short tons of 2,000 lb. each:
1 long ton = 1.12 short tons or 2,240 lb.
1 metric ton = 1.1 short tons or 2,205 lb.

Tr. Oz. Weight in troy ounces.

- In Unit of Quantity Column: no quantity recorded.

□ Precedes each class description card to distinguish class
descriptions from rulings.

INTRODUCTION

Volume III of the Import Commodity Classification is designed for use in compiling Canada's import statistics. It lists in alphabetic order both the English descriptions of all import commodity classes as they appear in monthly and quarterly trade reports, and the "office rulings" on commodity descriptions not specifically mentioned in the commodity classes but frequently encountered on customs import documents. Its purpose is to assist the staff in locating the class codes and units of quantity appropriate to the principal commodity descriptions with which they are faced. Because it is a working document, its content is continually changing, and it is therefore printed in loose-leaf form to facilitate revisions to individual pages as required.

This volume makes no attempt to provide a ruling for every product imported to Canada or for every term encountered on import documents. A complete index would be too unwieldy for daily use. Nor are the rulings it contains designed to be self-sufficient; each ruling must be read in the context of the full class description and notes contained in Volume I of the Import Commodity Classification (Catalogue No. 12-524). Finally, it is not intended to illustrate the contents of particular classes; that purpose is better served by Volume II of the Import Commodity Classification (Catalogue No. 12-525) which presents the same material arranged by commodity class, although even in that arrangement its lack of completeness limits its illustrative value.

All office rulings (including commodity class descriptions) are kept on punch cards to aid in making revisions and in controlling their accuracy and adequacy. This volume has been printed by listing these punch cards. This has imposed certain important limitations on the phrasing, punctuation and format which are used. The most important limitation is that of length: all class descriptions and most rulings are confined to one descriptive line not exceeding 35 characters in length (including all blank spaces, but not including the class code or unit of quantity). Because of this limitation there is extensive use of abbreviations, and this volume must be read carefully if users are to avoid being misled by these abbreviations. When the meaning of a ruling could not be expressed in one line even with abbreviations, a second line of not more than 31 characters was added. In these cases the second descriptive line is identified by a 4 letter indentation.

This volume contains four distinct types of item:

1. Specific commodity rulings: these consist of a 35 character description (occasionally supplemented by a second descriptive line of up to 31 characters), a unit of quantity (or a dash if goods which would be governed by a specific ruling are recorded without a quantity), and a class code. Leader dots link the ruling and its unit of quantity. Specific commodity rulings account for the vast majority of items in this volume.

Note that some rulings to certain classes specify a unit of quantity, while other rulings to the same classes show a dash in the quantity column. This will occur whenever a class takes both complete units and parts of units; rulings on complete units will usually specify a quantity (commonly "number"), while "parts" rulings will show a dash because parts are recorded without quantities.

2. Class descriptions: these consist of one descriptive line of up to 35 characters, a unit of quantity (or a blank if the class does not record quantity), and a class code. They do not have leader dots, and are further identified by the symbol \boxtimes preceding the description. In some cases class descriptions are sufficiently specific to make rulings on these classes unnecessary, but in other cases they are so general that they are useful only in locating a particular class in the classification.

Some class descriptions are preceded by the symbol # instead of \boxtimes ; an extra digit follows the class number for these class descriptions and for all rulings relating to these classes. Statistics on commodities so identified are not available except to employees of the Dominion Bureau of Statistics. In all publicly available records such classes are combined with the most appropriate general class within the same commodity group (e.g.: class 423-99-3 is included with 423-99, class 429-99-3 with 429-99, etc.).

3. Group descriptions: these are intended to assist in locating groups (or sub-groups) of commodities often thought of as collective units or important in the structure of the classification. They may contain either one or two descriptive lines (the second of which will be completed by leader dots), and may contain a unit of quantity (where all classes in the group show the same unit), or a dash (where no classes take a quantity), or a blank in the quantity column (where there is no common standard within the group). Group descriptions can always be identified by the fact that no numbers appear to the right of the hyphen in the code column.
4. Definitions and cross-references: these contain one or two descriptive lines, omitting both quantity and codes. They may define a term used in the rulings (e.g.: FAB IS AN ABBREVIATION FOR FABRICS.), indicate the "key words" under which rulings may be found (e.g.: OAK ... SEE LOGS, LUMBER), or warn against basing a decision on commodity classification on a term known to apply to more than one class of commodity (e.g.: PENACOLITE IS A GENERAL TRADE NAME.). As indicated in these examples the spaces for description are completed by leader dots.

These four types of item are intermingled throughout this volume in alphabetic order. The alphabetic arrangement has a few special features:

1. If the first word of an item is abbreviated (this is rare), it is nevertheless listed as though printed in full (e.g.: the ruling RR CARS, MINE, EXC SELF-PROPELLED ... comes in the middle of a group of rulings whose first word is RAILWAY).
2. If the first part of a description is numeric, it is listed according to the alphabetic portion of the description (e.g. 2, 4-D and 2, 4, 5T MIXTURES ... is the first ruling of the "D" section).

3. A number following the initial letter(s) of a description will cause that item to precede one with the same initial letter(s), (e.g.: AS 6150 WELDING WIRE, SPOOLED precedes AS IS AN ABBREV. FOR ALLOY STEEL because 6 in 6150 a number, precedes the I in IS).
4. Punctuation marks and hyphens are treated as blank spaces (see preceding example).
5. Blank spaces take precedence over either numbers or letters (e.g.: STEEL WOOL precedes STEELON FAB ...). This results in the grouping of all items having the same first word, and is especially important in view of the "key word" principle used in preparing this volume.
6. In a series of rulings using the same "key word", the ruling or class description for the n.e.s. (not elsewhere specified) category usually appears at the end of this series, e.g.:

PIGMENTS, GREEN	LUMBER, PINE, GEORGIA
PIGMENTS, YELLOW	LUMBER, PINE, SOUTHERN
PIGMENTS N.E.S.	LUMBER, PINE N.E.S.

The "key word" principle was used to reduce the need for double-indexing rulings, and thus to reduce the bulk of this volume. It requires that items be shown according to the work which most clearly expresses the basic nature of the commodity, and as a result it is usually unnecessary to index any term more than once. The following examples show how a few terms which may be encountered on customs documents are indexed in this volume according to the key word principle:

<u>Terms which May be Used on Customs Documents</u>	<u>Terms as Indexed by Key Word Principle</u>
X-ray <u>film</u> , unexposed	<u>Film</u> , x-ray, unexposed
Aluminum <u>foil</u>	<u>Foil</u> , aluminum
Bicycle <u>pumps</u>	<u>Pumps</u> , bicycle
Men's and boys' woollen <u>slacks</u> , not knitted	<u>Slacks</u> , men's & boys', wool, exc kntd
Garnetted wool <u>waste</u>	<u>Waste</u> , wool, garnetted
Printed <u>wrappers</u> in rolls	<u>Wrappers</u> , printed, in rolls

If a commodity is usually identified on documents primarily by a trade name, the trade name is normally the key word in rulings (e.g.: Spectra-glaze compounds, Randac resins). Where machinery and other equipment is encountered, the key word is that word which identifies the type of machine or apparatus (e.g.: strapping machinery, echo sounding equipment). In the above cases the terms "compounds", "resins", "machinery" and "equipment" have such a broad meaning that they do not provide a sufficiently specific answer to the question "What is the commodity?", and are therefore not suitable as "key words". To index under such terms would result in overlong and unwieldy lists in certain parts of this volume.

In preparing rulings covering multi-word names of chemicals and pharmaceuticals, the words which would normally appear first on customs documents (or in a chemical dictionary) were treated as key words (e.g.: sodium carbonate monohydrate). These items should be easy to locate.

To use this volume properly it is essential that the key word principle be thoroughly understood, and that the key word or a description be determined before an attempt is made to locate that description in this volume. While double-indexing has not been completely eliminated, failure to take the key word principle into account could make it difficult or impossible to find a particular item. The chief exceptions to the key word principle are the class descriptions and the cross-reference items used occasionally to direct attention to the proper "key words".

This volume makes extensive use of abbreviations because of the need to limit most descriptions to 35 characters. Some are standard dictionary abbreviations, some are terms widely used in industry, and some have been tailored to the specific needs of this volume by such devices as the omission of vowels or the omission of terminal syllables. There is no complete list of the abbreviations used, and more than one abbreviation may be used for the same word or phrase, and one abbreviation sometimes has two different meanings. The following examples define some of the more common abbreviations and illustrate the lack of uniformity:

(1) To describe steel:

AS ... alloy steel	CD ... cold drawn
CS ... carbon steel	CF ... cold finished
SS ... stainless steel	CR ... cold rolled
where distinguished	HR ... hot rolled
from other alloy	
steel)	

(2) To describe textile fibres, textiles, and textile products:

BL bleached	M-M)
COT cotton	MAN-MD) man-made
FAB fabrics	WOV woven <u>or</u> broad woven
KNIT) knitted	WOV NAR narrow woven
KNTD)	

(3) Miscellaneous:

ELEC electric(al)	MAT materials
EXC except	PLAST ... plastic
INCL including	PROD products
IND industry	PT) ... parts
INDUST ... industrial	PTS)
MACH machine(s)	SYN synthetic
MACHY) ... machinery	T.I. tariff item
MCHY)	

UNITS OF QUANTITY AND DEFINITIONS USED IN CANADIAN IMPORT STATISTICS

Bbl.	Volume in barells (for petroleum: 35 Canadian gallons or 42 U.S. gallons).
Broad woven ...	More than 12 inches in width.
Canned	Preserved solely by being shut off from air.
Carat	Weight in carats.
Cord	Volume in cords.
Cwt.	Weight in hundredweights of 100 lb. each.
Cwt. N.	For canned foods, weight of contents of cans in hundredweights of 100 lb. each, the weight of all containers and packing being excluded.
Doz.	Number of dozens.
Doz. Pr.) Dz. Pr.)	Number of pairs in dozens.
Ft.	Length in linear feet.
Gal.	Volume in Canadian gallons (1 U.S. gal. = 0.83 Can. gal.).
Gross	Number in gross.
Hardwood	Wood from broad-leaved trees.
Kg.	Weight in kilograms (1 Kg. = 2.2 lb.).
Lb.	Weight in pounds.
Lb. N.	For canned foods, weight of contents of cans in pounds, the weight of all containers and packing being excluded.
M.	Number in thousands.
M. B. Ft.) M. B. F.)	Volume in thousand board feet.
M. Cu. Ft.) M. C. F.)	Volume in thousand cubic feet.

M. Kw. H. Thousand kilowatt hours.

Narrow woven .. Not more than 12 inches in width.

N E S or NES .. Not elsewhere specified.

No. Number.

Oz. Weight in ounces.

Pack Number of packs.

Pair Number of pairs.

P. Gal. Volume of alcoholic content in terms of Canadian gallons
of the strength of proof (1 U.S. P.gal. = 0.74 Can. P.gal.).

Pkg. Number of packages.

Softwood, Wood from coniferous trees.

Sq. Ft. Area in square feet.

Sq. Ft.

3/8" equiv.)

) .. Volume in square feet of 3/8" thickness other thicknesses
to be converted to the equivalent of 3/8" thickness (e.g.
SF3/8 10,000 sq. ft. of 3/16" plywood = 5,000 sq. ft. of 3/8"
equivalent).

Sq. Yd. Area in square yards.

Ton Weight in short tons of 2,000 lb. each:
1 long ton = 1.12 short tons or 2,240 lb.
1 metric ton = 1.1 short tons or 2,205 lb.

Tr. Oz. Weight in troy ounces.

- In Unit of Quantity Column: no quantity recorded.

n..... Precedes each class description card to distinguish class
descriptions from rulings.

..... Statistics on this class not available except to employees
of the Dominion Bureau of Statistics.
